

Thank you for purchasing your Genie GT31 from www.gps-speed.co.uk

If you have bought an SD card with this unit, then you will NOT need to download any other software other than a performance analysis tool like GPS Results from www.gps-speed.com or GPS ActionReplay

We recommend the use of an SD card in the Genie GT31 as it makes the whole process far easier.

If you do NOT have an SD Card and want to manually extract the data from the unit you will need the following

- 1) NaviLink software to extract the data
- 2) USB device drivers for your Windows or MAC operating system
- 3) Performance software like GPS Results from www.gps-speed.com

ALL the necessary software can be found at

<http://www.locosystech.com/support.php>

Select Genie GT31 from the "FILES DOWNLOAD" link

From this webpage download

- 1) The Quick Start Guide
- 2) Owners Manual in English
- 3) GT31 USB driver for your operating system (Mac, Windows or Linux)
- 4) GT31 Utility Navilink II
- 5) OPTIONAL the windsurf set up guide by Basil Cambanis

GOT PROBLEMS (with your GT31) ~ then please

- 1) Visit this website : <http://mtbest.net/setting-up-navi-GT31.htm>
- 2) Call us or email us at BHIP Ltd on 0845 0900 192 or use contact us from the website
- 3) If it is REALLY technical, please email : roger@locosystech.com

We wish you luck and hope you soon get to grips with this great GPS device

Thanks for shopping with us
